LEADing lights

Transforming learning for all.

2018 IMPLEMENTATION JOURNEY

With the **Credentials** phase complete and over 130 schools fully migrated to Office 365 with 51,000 active users - there's a lot to celebrate so far. It's now time for a new chapter in the LEADing Lights adoption journey as we focus on the next wave, **Administration of Schools** together with further enhancements to identity and access management. During this time, you can expect to see new functionality, enhanced capabilities and more resources, all designed to support your school's digital transformation.

1 CREDENTIALS

Secure Authentication		All leaders, teachers and students have now activated their credentials. Your single sign on will give you access to new updates and features as they're released.
NEW IN 2018	Identity Management & Governance	Effectively manage your school's various permissions and access levels. With state-of-the-art security, you can easily customise what your staff and student groups can view. Whether it's accessing resources, tools or administration features - managing everyone's identity has never been simpler.

2 LEARNING & TEACHING TOOLS

Office 365 Suite	Now that migration of CEWA schools is nearly complete, it's time to leverage the capabilities of your suite of tools. Whether it's collaborating in Teams, sharing videos on Stream, or creating a Sway - there's always something to learn. There's also plenty of online training material available to get you started.
Other Learning & Teaching Tools	In addition to the tools and apps your school is already using, Minecraft Education Edition, Claned and Imagine Academy are ready for your teachers to start building lesson plans, upskilling students and accessing new shared resources. Stay tuned as we continue to evolve the capabilities of these tools across the year.

3 ADMINISTRATION OF SCHOOLS

Finance		Powered by Dynamics 365, this platform centralises billing, asset register, cash management and other administrative tasks. Financial reporting will also allow you to produce flexible, reports with the ability to drill down to a transactional level.
Student Management		A holistic view of every student's profile, academic performance, attendance and wellbeing. This capability is also built on the intelligent Dynamics platform that integrates with each portal, so that information is consistent for all users.
School Management		Bringing together the most important administrative and management tasks in a single place – from academic management to communications, marketing and reporting – it's all in one place.
NEW IN 2018	PRIME	Streamlining your policies, procedures and risk management efforts has never been easier. CEWA's Policy Risk & Incident Management for Education (PRIME) initiative is an online platform for you to create a risk registry, view policy documentation and review everything in a single dashboard.

4 PORTALS & INTRANET

NEW IN 2018	Teacher Portal	A digital hub for teachers to manage classes, view a snapshot of student status, plus a deep dive into wellbeing and engagement. In addition, the portal will showcase key documents, Claned boards and other resources.
	Student Portal	Every student will have a personalised space to see their reports, learning goals, assessments and teacher feedback. From day to day, each child can access their learning resources, view upcoming calendar activities and more.
	Parent Portal	A one-stop-shop to view a child's attendance, timetable, semester reports and adjust demographic details. Parents can also keep up to date with school activities, noticeboards and policies.
	School Intranet	Your new, customisable school intranet template will roll out this year, so you can create a digital hub for your own school. CEWA's new staff intranet will also be release at the end of term 2, giving you an easier platform to find policies, curriculum documentation or book your next PD session.

5 INSIGHTS

NEW IN 2018	Power BI	Leaders and admin teams will now have access to a new analytics 'dashboard' - a tool that allows you to analyse and interpret your school's data. This data can then be leveraged beyond the single school to reveal industry and peer benchmarks. As the year progresses, richer and more data will generate greater insights.
